SUMMARY

Senior SRE/SWE with 15+ years experience full stack coding plus extensive teaching, public speaking (Toastmasters), and project management (PMP) experience, seeking an instructor role.

SKILLS

Languages	Compute	Data	Verticals	Roles
Golang	Helm/k8s	Oracle/SQL	Finance/Payments	App Developer
Python	AWS/GCP/AZ	Mongo/NoSQL	Accounting/B&R	DevOps Eng
Java	Docker/Compose	Elastic/Kibana	Cloud Mgmt	Scrum Master
C/C++	microservice arch	Kafka/Storm	EdTech Startup	Project Manager
React/JS	Jenkins/CI		Network Security	Public Speaker

WORK EXPERIENCE

Aporeto Inc., San Jose, CA

Site Reliability Engineer

Sept 2017-Present

Lead DevOps/SRE supporting Development and Sales Engineering teams

- Expanded Concourse CI pipeline footprint from GCP to AWS and Azure
- Developed offline K8s- and Docker-based self-installer to ensure regulatory compliance

Apple Inc., Cupertino, CA

Senior Software Engineer

May 2015-Aug 2017

Designed and implemented network security and cloud management APIs to support NOC while setting up DevOps/SRE pipeline for software development teams

- Accelerated network collection from overnight to near-real time by building high-throughput Kafka pipelines in Golang, enabling NOC to troubleshoot outages remotely
- Built consensus to adopt microservice framework over monolithic architecture for Java/Storm-based replacement of legacy inventory product
- Standardized and scaled DevOps tooling to support multiple envs, VMs, and data centers for high-availability, A/B phased rollouts, and global disaster recovery
- Developed full-stack SRE dashboard in Oracle/Python/React/JS, enabling managers to visualize microservice dependency footprint across teams, resources, and data centers

Chungdahm Learning, Seoul, KR

Project Manager and Business Developer

Feb 2014-Nov 2014

As project manager led cross-functional team in designing and authoring tablet-based interactive ESL textbooks, then as BusDev marketed underlying technology platform in Korea and abroad

- Managed cross-functional team of authors, animators, and designers in monthly publishing cycle of “Smartbooks”
- Reduced overtime resulting in staff attrition, enabling headcount to grow from 25 to 30
- Prototyped automated demo framework, enabling mock classroom of up to 40 concurrent virtual users
- Built demo Smartbook to test viability into Korean religious education market
- Validated integration feasibility with Knewton's adaptive learning API
- Released press announcements for partnership deals in Vietnam and Thailand

Seoul Global Center, Seoul, KR

Startup Incubatee and Technology Consultant

Mar 2013-Feb 2014

Under government startup incubator Seoul Global Center, launched Korean language transliteration product, while collaborating with fellow incubatees on mobile app project

- Developed and promoted new Korean transliteration standard based on Japanese Romaji
- Built Java-based web APIs to support real-time transliteration
- Managed offshore development team for fellow incubatee SayWhat language app
- Defined and executed go-live strategy for SayWhat on Android/iOS app stores and AWS
- Facilitated TOGAF-based corporate training course, preparing students for Cisco BVA certification exam

Cisco Systems, San Jose, CA

Release Engineer, Cloud/Network Management

Feb 2011-Feb 2013

As lead Release Engineer on Cisco Prime Infrastructure ensured seamless collaboration, and evangelizing both technical solutions and best practices across Agile community

- Decomposed monolithic Java/Maven releases into componentized, enabling 40 developer team to scale from 30 to 50 components and speeding build from 8 to 2 hours and supporting 5 further client development teams
- Automated version-aligned API doc generation, reducing customer support volume
- Integrated Black Duck license managing software to secure against IP vulnerabilities
- Tech Evangelist for firmwide Agile community, presenting at *Agile@Cisco Day 2012*

Goldman Sachs, London, UK

Vice President, Treasury IT

Nov 2007-Sep 2009

As project manager app owner of multiple Treasury products, drove functional analysis and prioritized work to align with business value for users

- Managed team of 3 engineers to implement Java/EMS receipts pipeline, eliminating legacy Cobol mainframe from flows
- Co-led with Moscow Ops counterpart to attain banking charter with Central Bank of Russia, enabling FX trading in new currency markets

- Trained and directed local and offshore support teams, ensuring meeting of Ops SLA

Goldman Sachs, London, UK

Developer, Treasury IT

Mar 2003-Nov 2007

As senior developer worked closely with counterpart in Treasury Ops to analyze data, discover risks, and deliver enhancements

- Standardized and linked global payments pipeline for 24/7 uptime and disaster recovery
- Prototyped legacy ant/jar-based Java builds to Agile Maven/RPM-based CI
- Developed data-driven anti-money laundering account surveillance system in C++ to support Business Intelligence, Legal, Compliance and SOX regulations

Goldman Sachs, New York, NY

Sep 2001-Feb 2003

Developer, Clearance Operations

- Automated regression testing for global Securities Clearance
- Doubled volume of managed accounts by onboarding subsidiary B&R into corp ledgers
