| Los Angeles, CA

SUMMARY

Software and DevOps engineer with deep experience ranging from such global industry leaders as Apple, Goldman Sachs, and Cisco to early-stage high-growth startups, specializing in CI/CD automation, platform infrastructure, and full-stack development. Track record of measurable delivery: release pipelines cut from 8 hours to 2, STP rates lifted from 10% to 60%, customer accounts tripled. Returning to tech in 2026 after launching a small business; seeking a 100% remote role in software or platform engineering.

SKILLS

Languages	Infrastructure	Data	Domains
Golang, Python Java, Kotlin	Kubernetes / Helm AWS / GCP / Azure	Oracle / SQL Sybase, DB2	Finance & Payments Healthcare Data
C / C++	Docker, Terraform	MongoDB / NoSQL	Cloud Management
React / JS	Jenkins, Concourse CI	Elasticsearch, Kafka	Network Security

EXPERIENCE

Dragon and Crane Dojo — Founder & Head Instructor

Los Angeles, CA • 2021–Present

Founded and operate a martial arts school; managing all instruction, business operations, and student development as a sole proprietor.

Deep6 AI — Platform Engineer

Pasadena, CA • 2018–2022 • Seed-stage clinical AI startup

Built and maintained platform infrastructure enabling a clinical AI startup to scale from proof-of-concept to a funded, multi-customer product.

- Integrated Data Engineering with AppDev through a Terraform-managed platform, delivering a unified end-to-end release pipeline
 - Automated on-prem packaging and deployment for Sales and Customer Success, supporting **3× growth in customer accounts** (3 → 10)
 - Built automated business and cost reporting dashboards supporting operations, finance, and Series B fundraising
 - Automated employee onboarding provisioning as headcount scaled **from 20 to 50**
-

Aporeto — Site Reliability Engineer

San Francisco, CA • 2017–2018 • Series A network security startup

Extended CI/CD infrastructure to support the company's first on-premises enterprise deployments.

- Extended Concourse CI pipeline from GCP to AWS and Azure
 - Built offline Kubernetes- and Docker-based self-installer, enabling **first 3 on-prem installations** of a SaaS product and unlocking regulated-industry customers
-

Apple Inc. — Senior Software Engineer

San Jose, CA • 2015–2017 • Network Management

Designed network management APIs and established DevOps practices for Apple's internal NOC infrastructure.

- Automated Disaster Recovery, reducing recovery time by an **order of magnitude**
 - Built high-throughput Kafka/Golang pipeline accelerating network telemetry collection from overnight batch to **near-real-time**, enabling remote NOC troubleshooting
 - Integrated automated testing with CI/CD, enabling a **2× increase in test coverage** within one year
 - Developed full-stack SRE dashboard (Oracle / Python / React) providing visibility into microservice dependencies across teams, resources, and data centers
 - Standardized DevOps tooling across multiple environments, VMs, and data centers for high-availability A/B rollouts and global disaster recovery
-

Chungdahm Learning — Project Manager / Business Developer

Seoul, South Korea • 2014–2015 • EdTech

Led cross-functional delivery of interactive ESL tablet textbooks and drove international business development.

- Coordinated 3 curriculum and 2 design teams onto a unified project plan, reducing missed delivery targets **25%** and improving detected error rate **10%**
 - Prototyped automated demo framework supporting mock classroom of up to 40 concurrent virtual users
-

Cisco Systems — Release Engineer

San Jose, CA • 2011–2013 • Cloud / Network Management (Cisco Prime Infrastructure)

Led release engineering on a large-scale network management platform, driving CI/CD modernization across a 40-developer, multi-team organization.

- Decomposed monolithic build into componentized releases, scaling from 30 to **50 components** and cutting build time from **8 hours to 2 hours**
 - Increased release frequency **2×** and reduced packaging time **25%** while integrating 5 additional client development teams
 - Automated version-aligned API documentation generation, reducing customer support volume
 - Tech evangelist for firm-wide Agile community; presented at *Agile@Cisco Day 2012*
-

Goldman Sachs — Developer → Vice President

New York, NY & London, UK • 2001–2009 • Securities Clearance & Treasury IT

Advanced from developer to VP over 8 years, building and managing mission-critical distributed payment and settlement systems across global operations.

- Designed and delivered projects for clearance and B&R systems, lifting **STP rates from 10% to 60%** while system volumes grew **4×**
- Standardized and linked global payments pipeline for 24/7 uptime and disaster recovery
- Developed data-driven anti-money laundering surveillance system in C++ supporting Legal, Compliance, and SOX reporting
- Led Java/EMS pipeline implementation eliminating legacy COBOL mainframe from Treasury flows; managed team of 3 engineers through full delivery

- Co-led initiative with Moscow counterpart to attain banking charter with the Central Bank of Russia, enabling FX trading in new currency markets
 - Automated regression testing for global Securities Clearance; onboarded subsidiary B&R into corporate ledgers, doubling volume of managed accounts
-

EDUCATION & CREDENTIALS

Brown University — BSc. Mathematics & Computer Science • 2001

Project Management Institute — Project Management Professional (PMP)
• 2013

Toastmasters International — Competent Communicator; Advanced Leadership Silver; PR Officer, District 93 Korea • 2014

Cisco Systems — ICND1 • 2016
