Dear Principal Jensen Cachon,

I am applying for the math teaching position at Chavez LA ASE for the 2026-2027 school year. I bring a BSc in Mathematics and Computer Science from Brown, fifteen years as a software engineer at Apple, Cisco, and Goldman Sachs, and five years founding and teaching at Dragon and Crane Dojo — a small private school I built from the ground up. I am turning toward LAUSD because I want to spend the next phase of my work in a public school classroom serving the families I most want to serve.

An academy model demands math taught as actual practice rather than procedure followed in hopes of credit, and that is the kind of math I learned and used — first at Brown, then in the production systems I built at Goldman Sachs and Apple. I bring the habit of carrying a problem all the way to a working answer, and the patience for the redirects and dead ends along the way. At Dragon and Crane I have already done the work of writing and self-publishing my own curriculum, sequencing multi-year arcs in chess, coding, and physics, and tracking individual student progress — the lesson-design and classroom-management muscles a self-contained academy classroom asks for are already in place.

My industry background also lets me answer the question every math student eventually asks — when am I going to use this? I have used it: settlement systems at Goldman Sachs, network management APIs at Apple, clinical AI infrastructure at Deep6 AI. Math was not preparation for those jobs; it was the substance of them, and I want Chavez students to hear that from someone who has lived inside the answer.

Thank you for your consideration. I would welcome the opportunity to discuss how I can best serve the Chavez ASE community.

Sincerely,

David Chung
